

Nitsa Mehndiratta

Bengaluru, India | +91 8053771120 | nitsamehndiratta@gmail.com | <https://github.com/Nitsaserver> | <https://www.linkedin.com/in/nitsamehndiratta>

AI/ML and Software Engineering student with hands-on experience in anomaly detection, backend systems, MLOps-style automation, and cloud-native development. Built **Arena**, a production-like Machine Learning system supporting real-time inference, auto-retraining, and microservice orchestration using FastAPI, Docker, and MySQL. Skilled in Python, FastAPI, AWS, GCP, and REST API development.

Technical Skills

Languages:	Python, JavaScript, TypeScript, Java, C++
Frameworks & Tools:	FastAPI, React, Node.js, Docker, Git, Bash, Linux CLI
AI / Machine Learning:	Generative AI (GenAI), Retrieval-Augmented Generation (RAG), Large Language Models (LLMs), Natural Language Processing (NLP), Agentic AI, Anomaly Detection, Supervised & Unsupervised Learning, Neural Networks, Inference Pipelines, Auto-Retraining
Libraries:	TensorFlow, Scikit-learn, NumPy, Pandas, Matplotlib, LangChain
Cloud & DevOps:	AWS (S3, EC2, IAM), Google Cloud Platform (Cloud Run, Cloud Functions)
APIs Database:	MySQL, MongoDB, Firestore, REST APIs

Experience

Backend Automation Intern: April 2025 – July 2025

MendZone (Remote)

- Automated backend workflows using Python, MySQL, and Bash on AWS Cloud9.
- Built secure S3 upload and retrieval pipelines using pre-signed URLs and IAM.
- Debugged and optimized REST APIs using Postman, improving reliability and response performance.

Founder: 2022 – Present

GoForDonateIn, Bengaluru

- Built and operated a donation coordination platform; led **7+ drives** impacting **1000+ beneficiaries**.
 - Managed end-to-end development, operations, partnerships, and volunteer engagement.
-

Education

BCA, Bachelor of Computer Applications:

Christ University, Bengaluru

GPA: 3.67/4 (9.18/10)

Selected Projects

Arena — AI-Powered Cyber Simulation & ML System (2025)FastAPI, Python, Docker, MySQL, React

- Built a production-style ML microservice for real-time anomaly detection, cyber-attack simulation, and autonomous agent behavior.
- Designed a real-time inference engine and an auto-retraining pipeline that re-learns every 5 minutes.
- Implemented event pipelines for scoring, blocking, logging, and mission-state progression.
- Integrated a **RAG + LLM-based explainability layer** using NLP to generate contextual reasoning for detected and blocked events.
- Developed a React dashboard to track anomaly trends, attack metrics, and retraining cycles.
- Containerized services with Docker for consistent multi-environment deployment.

AI-Powered Personalized Story Generator (2025) React, Python, Cloud Run, Firestore, Gemini

- Built a generative AI platform with feedback-driven agentic behavior and adaptive personalization.
 - Developed a secure Python backend deployed on Cloud Run with private access configurations.
 - Integrated Firestore for user profiles, preference storage, analytics, and generation history.
-

Leadership

- **Deputy Lead, University Literature Committee** — Coordinated a 20+ member team and delivered large-scale university events.
- **Event Head, FLUX 2025 (National IT Fest)** — Managed the IT Manager event; nominated as the only first-year to lead an event.
- **Technical Team, Samagra (CS Association)** — Executed workshops, hackathons, and technical initiatives.
